

Is Robotic Process Automation (RPA) right for you?

Streamline tasks, improve accuracy, and reduce costs.

DID YOU KNOW?

According to ConnectWise, 94% of workers perform repetitive, time-consuming tasks. RPA is scalable and can be customized to fit the needs of businesses of all sizes. While large enterprises may implement RPA across multiple departments, small and medium-sized businesses can also gain a competitive edge by automating key tasks, allowing them to focus on growth and innovation without the burden of manual processes. **Check each box that applies to determine if RPA is the right fit for your business.**

RPA SUCCESS STORIES

Automating Personnel Document Exports

A healthcare provider needed to export thousands of personnel documents during an HR system transition. YYTECH used Microsoft Power Automate to develop an RPA BOT that ran for three days, exporting and organizing over 4,000 reports and attachments. This automation saved days of manual effort, freeing up staff time.

Streamlining Training Survey Processing

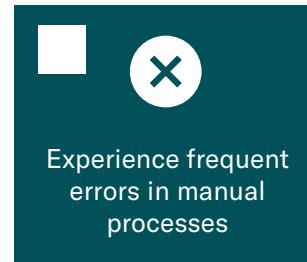

A Michigan training facility wanted to improve how it tracked training attendance to ensure quality control. YYTECH developed a custom Microsoft C# application to scan, process, and archive training surveys using optical character recognition (OCR) technology. The application uploads results to a database and generates reports. Processing hundreds of surveys daily, the solution saves hours each week.

Want to automate repetitive and rule-based tasks

Deal with high volumes of data entry and processing

Experience frequent errors in manual processes

Want to improve efficiency and reduce costs

Need to ensure consistency in data handling

Seek to enhance employee productivity

Aim to strengthen security and compliance

Want to improve customer support and troubleshooting
